Five Foundational GLAD Strategies

1. Graphic Organizer Input Chart (GOIC)

- Students are in proximity to the teacher and all can see the chart and teacher.
- Chart is pre-planned (e.g., lecture notes, sketches, words penciled in ahead of time).
- Teacher presents information in chunks (e.g., in categories/themes or subtopics).
- The teacher uses color coding for each chunk of the lesson.
- Teacher adds picture file cards or other visuals at the time of initial input.
- Chart includes academic vocabulary.
- Teacher uses 10/2 lecture. (Use 10/2 rubric for details.)
- Students are given writing opportunity at the end (e.g., in their learning logs).
- Students add picture cards or word cards during review.
- When indicated by the teacher, students orally **read** words/phrases from the chart.

Five Foundational GLAD Strategies

2. Pictorial Input Chart

- Students are in proximity to the teacher and all can see the chart and teacher.
- Chart is pre-planned (e.g., lecture notes, sketches, words penciled in ahead of time).
- Teacher presents information in chunks (e.g., in categories/themes or subtopics).
- The teacher uses color coding for each chunk of the lesson.
- Chart includes academic vocabulary.
- Teacher uses 10/2 lecture. (Use 10/2 rubric for details.)
- Students are given writing opportunity at the end (e.g., in their learning logs).
- Students add picture cards or word cards during review.
- When indicated by the teacher, students orally **read** words/phrases from the chart.

Five Foundational GLAD Strategies

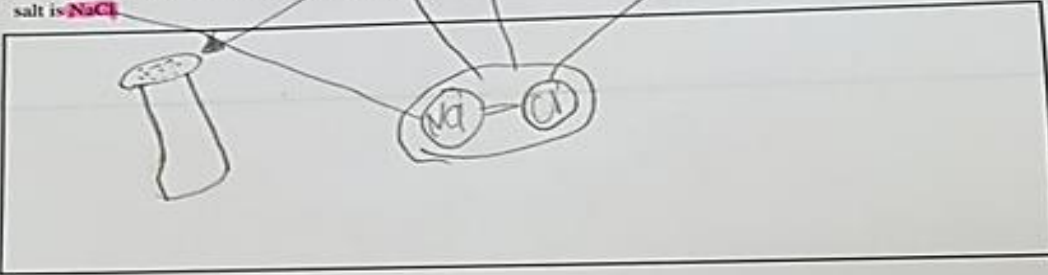

3. Expert Groups

- The expert group includes one student from each table/group working with the teacher.
- Materials include expert paper (text with boxes) and a mind map.
- Teacher and students read mind map categories.
- Teacher uses pictures to identify the main ideas that students will read about.
- One paragraph at a time, the expert group text is chorally read by students.
- After reading each paragraph, the teacher guides students to highlight the main ideas in the text.
- For each highlight, students make a representative sketch and draw a line connecting the sketch to the highlight.
- As the activity progresses through paragraphs, the teacher releases responsibility to students to come up with main ideas.
- Students record information on the mind map (e.g., bullet and sketch).

Expert Group: Sodium Chloride

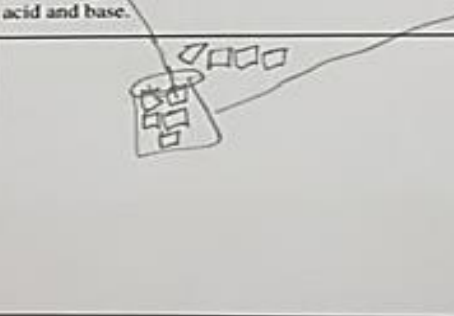

Matter/Chemicals (elements)

One type of commonly known matter is salt. Salt is also known as sodium chloride. Salt, or sodium chloride, has two elements or chemicals that make up the matter. The first element is called sodium. On the Periodic Table of Elements, sodium's symbol is "Na". The other element that makes up salt is called chloride, which can also be found on the Periodic Table of elements and represented as "Cl". When sodium is combined with chloride, it forms the molecule salt. A molecule is two or more elements connected together. A molecular bond gets created between one sodium element and one chloride element. Together, the chemical symbol for salt is "NaCl".

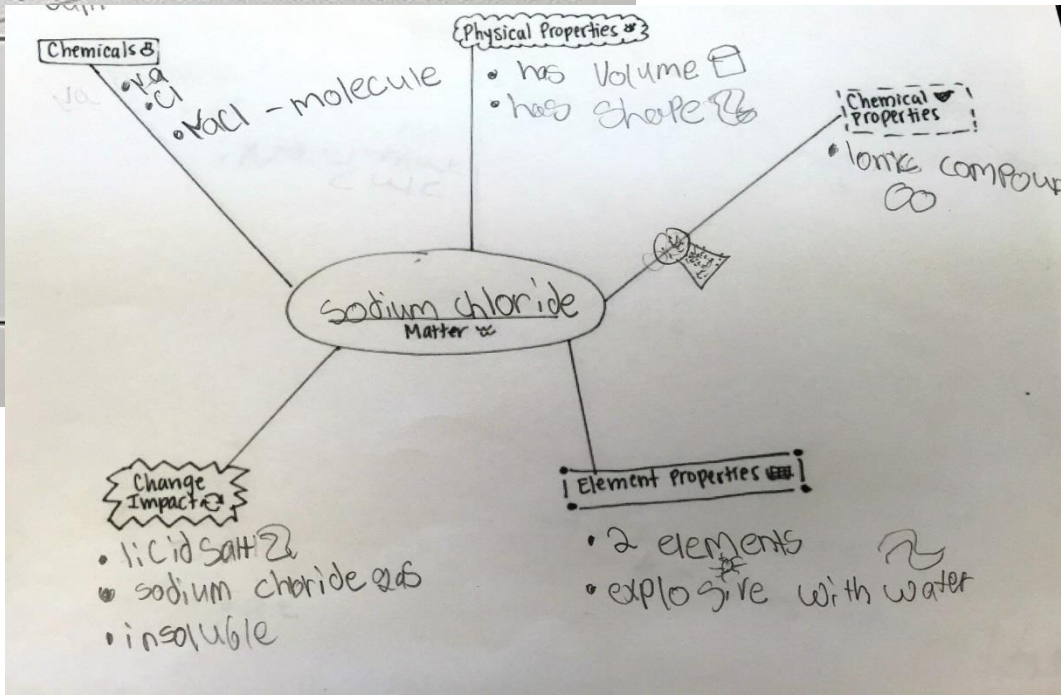

Physical Properties/Chemical Properties

Sodium chloride has many special properties. The physical properties of salt are that it has volume and shape. If salt is put into a container, it takes the shape of that container. For example, table salt is a solid because each grain of salt stays the same shape. Sodium chloride can be described as a white powdery substance. Sodium chloride is most commonly found as a solid state of matter. This means that its atoms are packed tightly together, with little room for movement. Sodium chloride also has chemical properties that make it a unique form of matter. Sodium chloride is an ionic compound, which means that it has positive (Na+) and negatively (Cl-) charged ions within the chemical. Another property is that Sodium chloride is a neutralized reaction of an acid and base.

Element Properties (alone)/Change

Five Foundational GLAD Strategies

4. Process Grid

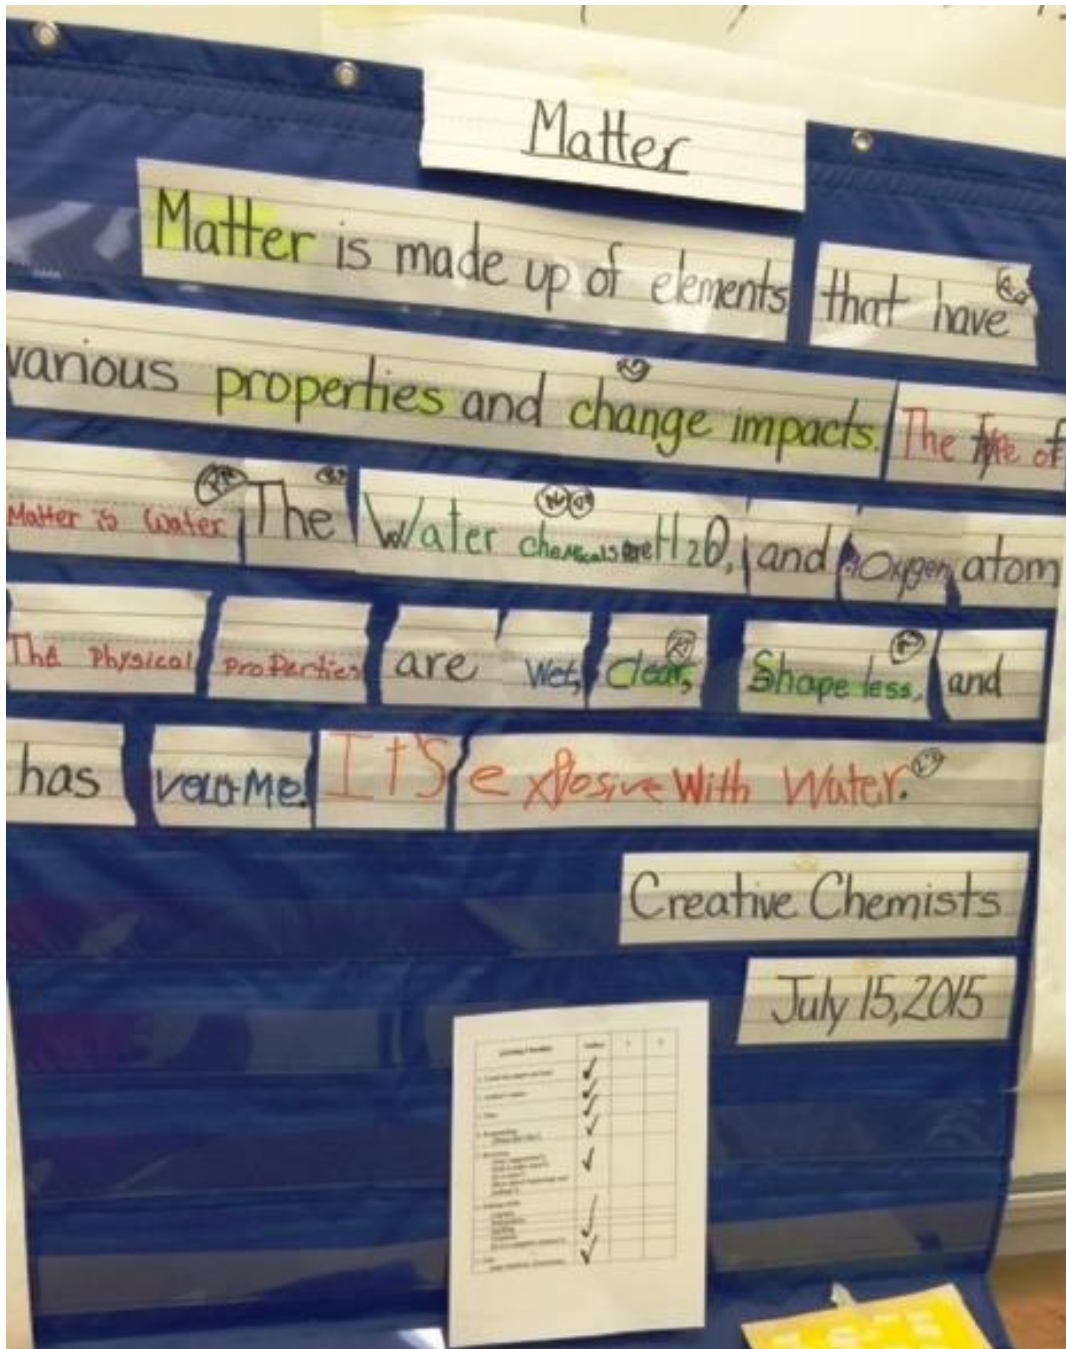

- A process grid is on the wall, with the categories already listed in the columns.
- Teacher writes topic of first row; topic matches the center (topic) of the mind map.
- For each column, students confer with their team to decide what facts go in the columns of row 1.
- The teacher **randomly** calls on individual students from teams to share their answers and teacher writes correct information on the grid.
- If a student does not have the answer, the teacher tells the team to confer again and later has another opportunity to answer.
- Teacher presents first row and the remaining rows are presented to teams by individual team "experts" (from expert groups).

Matter	Chemicals (elements)	Physical Properties	Chemical Properties	Element Properties	Change Impacts
Water	H_2O 1 oxygen atom	- clear - volume - shapeless - wet	- form bases - chemical properties	- it's explosive - oxygen is highly flammable	- evaporates - soluble
Sodium Chloride	molecule	- has volume - has shape	explosive with water	2 elements	melt

Five Foundational GLAD Strategies

5. Cooperative Strip Paragraph

- In a pocket chart, there is a topic sentence to the lesson that is either written by the teacher on a sentence strip or created by the whole class in response to a prompt.
- Teacher asks students what words in the topic sentence should be highlighted.
- Teacher models how to create good sentences.
- Teacher asks teams to find the relevant information from the process grid to develop a sentence on their topic.
- Teams write a sentence on a sentence strip in their team color and put it in the pocket chart in no particular order.
- When editing happens (may be a different day)
- Teacher uses an editing/writing checklist with students.
- Paragraph is revised/edited by teacher and class one skill at a time (e.g., content, does it make sense, editing spelling, grammar, etc.). *(Note: It is okay if teacher only edits one type of thing on a particular day.)*
- Teacher and students use other resources (e.g., charts) in the room to help throughout the editing process.
- Students have opportunities to reread the paragraph orally throughout the editing process.

Sprinkle other strategies

Cognitive Content Dictionary

- Teacher records word on chart and all students chorally repeat the word.
- Teacher asks how many students have/have not heard of the word.
- Student teams put heads together to come up with prediction that is backed up with why they think that. Teacher records their ideas.
- Teacher introduces gesture and synonym or a phrase for the word and students practice.

In a subsequent lesson or day:

- Student teams put heads together and then share their final meaning with the class.
- If students don't understand the final meaning, the teacher may stop instruction here and keep the word for another day. In that case, stop here.
- Teacher records final meaning, adds a sketch and may record word in primary language of EL students (e.g., Spanish).
- Teacher leads a word study (e.g., word's origin, parts of speech, etc.).
- Teacher models an oral sentence and then teams create their own sentence and report out to the whole group.

Word/Term	Prediction	Final Meaning	Oral Sentence
chemists 17 H-2 NH-15 suffix spencer plural 99 the process of them	-Chin O Cognitive Content Dictionary • a type of scientist (suffix) • I think it means some kind of dust (smaller word inside)	-Prove it! -Sketch! Cite your source • scientists who study matter and its properties (library reinforcement) handwritten • an expert in chemistry (Webster's New World Dictionary, p. 45)	
condensation 16 A-5 NH-11 suffix the process of them	• It's like a water cycle (condensate)	• water that collects on a cold surface (The Trip to...)	
chlorine dioxide electrocution erratic syntax			

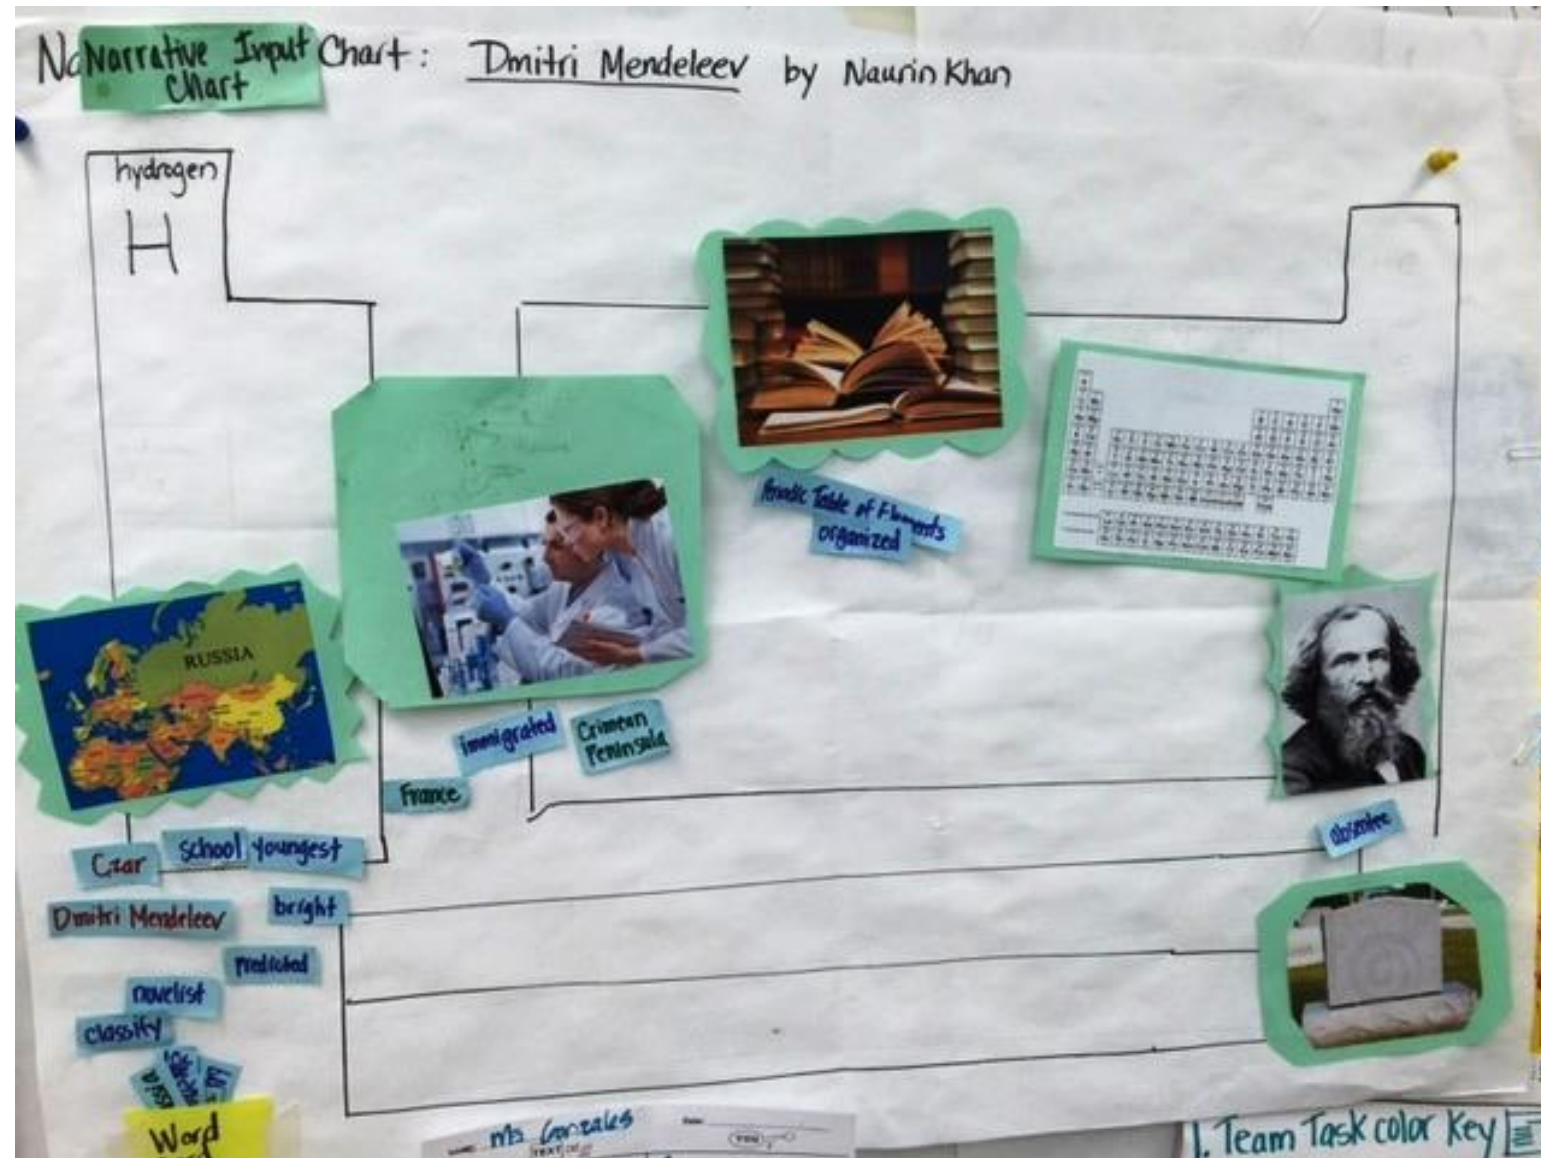

Sprinkle other strategies

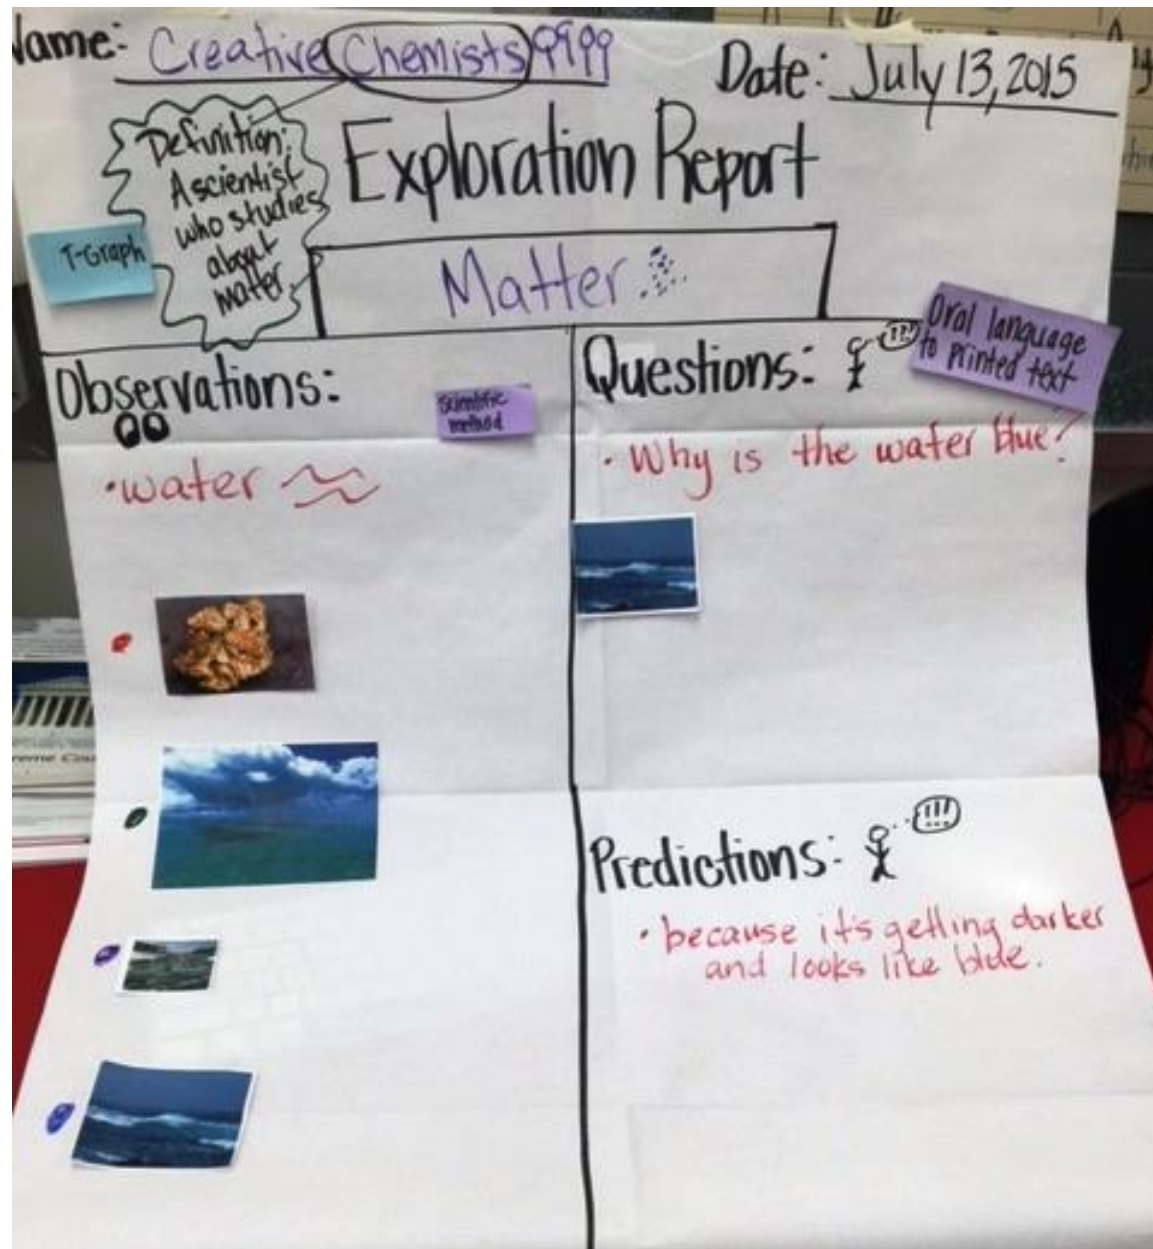

Narrative Input Chart

- Students are in proximity to the teacher and can all see the chart and teacher.
- Props include a background and story cards that have pictures on the front and corresponding narrative on the back.
- First reading: Teacher reads the story all the way through with fluency, prosody, and arm/body gestures.
- The narrative uses academic vocabulary.
- Teacher provides reflection or personal interaction question at the end of the story for students to process.

On subsequent days:

- The teacher retells the story while students add word cards and/or speech bubbles to the background during retell.

Sprinkle other strategies

Exploration Reports

- Use real photos, in color, if possible
- Choose high interest photos
- Use the Exploration report as the first team activity as an introduction to the unit
- Select 2-3 photos for each team
- Each team will then decide on one photo to report on
- Each team must then decide on an observation, a question and a prediction that they will report to the class
- The teacher will then ask each team for their observation, recording the observation in the color that represents each team.
- The teacher will then record each team's question in the representing colors
- The teacher will then record each team's prediction in the corresponding colors.
- The teacher uses the report to determine background knowledge.
- The teacher can revisit the report as the unit progresses and information is learned.

Sprinkle other strategies

Clunkers and Links/ SQ3R

- Clunkers and Links are guided reading strategies for students at or above grade level. Clunkers are words that “stump” students and links are words that make connections for them (e.g., they’ve predicted or heard previously.)

SQ3R

- Survey (Text Features)
- Question (Prediction)
- Read (Read quickly, focus on important words)
- Recite (Write the answers to your predictions)
- Review (Go back, read and check your answers in the text)

Matter **Chlorine**
Predictions **Calcium**

Confirm or Refute

Clunkers **Links**

properties **details** **aspects** **elements**

inflate **fill with air**

basketball **Hockey puck** **volleyball** **sea shells** **flowers**

SQ3R STUDY METHOD
adapted from Francis Robinson

NAME of TEXT: _____ Pages: _____

S = SURVEY Read title, subtitles, pictures, maps, diagrams, first and last sentences in each paragraph, key words, summary, review.

Q = QUESTION Predictions: What do you think the text will be about? What do you think you will learn?

1.
2.
3.
4.

R = READ Read quickly, focus on the important words.

R = RECITE Write the answers to your predictions:

1.
2.
3.
4.

R = REVIEW Go back, read and check your answers in the text.

1. What was the most interesting thing you read?
2. What was the most important thing you read?
3. What was new information for you?
4. What will you do with this text and information?

Partners: _____ Date: _____

basketball **Hockey puck** **volleyball** **sea shells** **flowers**

Sprinkle other strategies

Sentence Patterning Chart

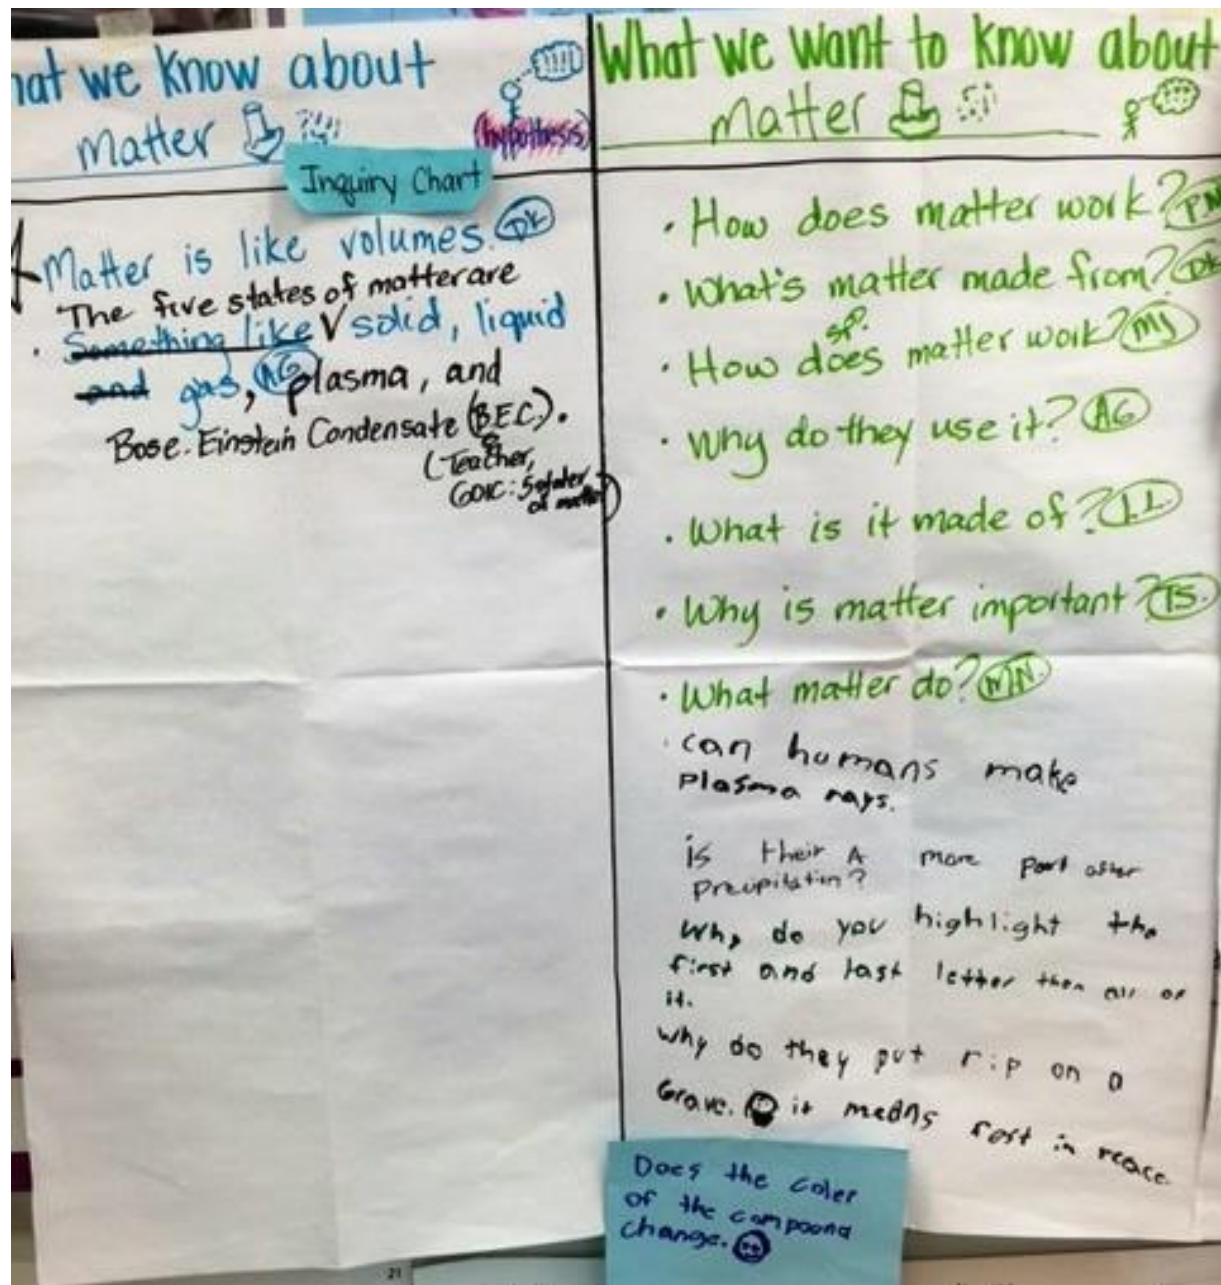

- Students are in proximity to the teacher and can all see the chart and teacher.
- The teacher writes/defines/describes 5 parts of speech (one at a time: adj., noun, verb, adverb, prepositional phrase), using gestures when appropriate.
- Teacher asks students to discuss examples of words for each part of speech, one part at a time, with a partner.
- Students call out their ideas and teacher writes appropriate responses on the chart, one part at a time.
- Final chart has five color-coded columns labeled in the following order: adjective, noun, verb, adverb, prepositional phrase (each in a different color).
- Teacher leads students in Farmer in the Dell tune with academic vocabulary ("adjective, adjective, noun...").
- Teacher leads students in tune with words the teacher selects from the chart with post-its.
- Individual students take turns moving post-its to make a new sentence and the class sings the song.

Note: SPC is often followed by an extension activity such as Trading Game, Flip Chant, Strip Book, Reading Game.

The chart is divided into five columns, each with a color-coded header and examples:

- Adjective (Blue):** -describes, adjective. Examples: sweaty, salty, sticky, dirty, smooth, smart, intelligent.
- Noun (Red):** -topic, -subject, replace thing. Examples: chemists, water, mother.
- Verb (Green):** -ing, to, verb, -gerund. Examples: exploring, working, smelling, writing, researching.
- Adverb (Purple):** -ly, -hood, -modify. Examples: well, hard, softly, quietly, carefully, dangerously, adventurous.
- Prepositional Phrase (Brown):** where, when. Examples: in the lab, at the lab, in a secret place, behind the hospital, inside the hospital.

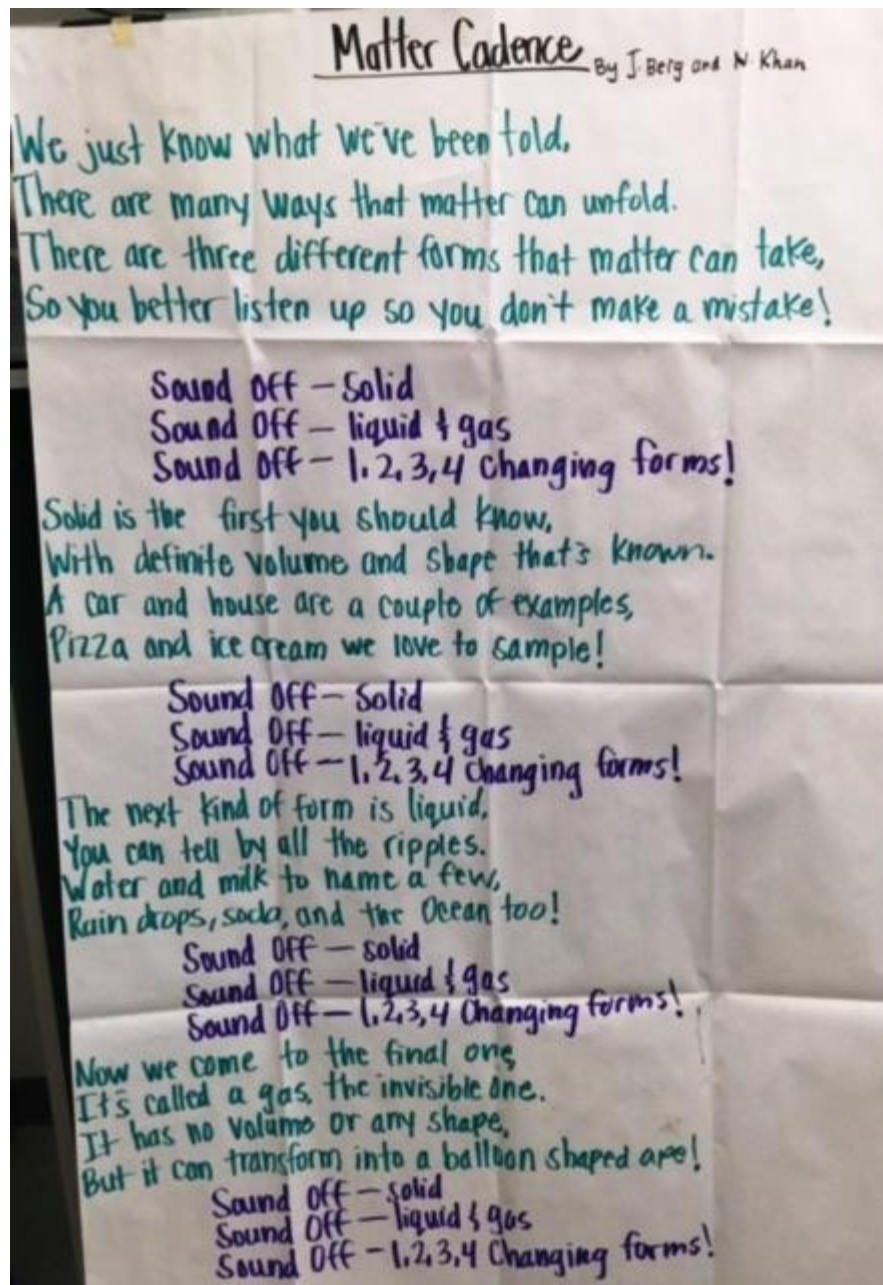

Additional notes and drawings include: 'color coding' (purple), 'Obscure Char' (purple), 'Sentence Patterning Chart' (blue), and various small sketches like a house and a person.

Sprinkle other strategies

Inquiry Charts

- Chart includes two columns, "what do we know about ____" and "what do we want to know about ____." Columns are color coded.
- Teacher uses the term "hypothesis" when teaching the first column. Teacher explains what a hypothesis is OR there is evidence that this term has been taught before.
- Students discuss together (e.g., with a partner) their hypotheses for the first column.
- Teacher solicits feedback and writes **verbatim** the information students provide.
- Teacher explains the second column (e.g., that it can be answered with question words such as who, what, why) OR there is evidence that this has been taught before.
- Students discuss together (e.g., with a partner) their questions for the second column.
- Teacher solicits feedback and writes **verbatim** the information students provide.

Sprinkle other strategies

Poetry/Chants

- Chant/poem is written on chart paper.
- Chant/poem is color coded (e.g., by stanza).
- For first reading, teacher reads or chants the entire poem with the fluency, rhythm, and prosody of a native speaker.
- Students are prompted to read along on first reading. (*Note: It is okay if not all students can read along.*)
- *Review:*
- Teacher solicits words from students and highlights them (e.g., are unfamiliar, high-level and/or academic).
- Students explain why they picked those words.
- Teacher adds sketches or picture file cards.
- Chant/poem includes academic language.

Sprinkle other strategies

Story Map

- Chart is prepared as a graphic organizer with elements of narrative genres (e.g., setting, characters, plot events, problems, resolutions).
- The teacher asks students to discuss each element with a neighbor, using information from a story or text (one element at a time).
- After students discuss an element, teacher asks them to call out their information and teacher writes and/or sketches correct information on the story map.

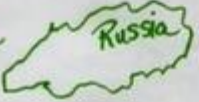

Story Map

Title: Dmitri Mendeleev Author: Naurin Khan

Characters:

- Mom ♀
- Dad ♂
- Dmitri Mendeleev ♀ — uncommon talent
— radical

Setting:

• Russia 

Events:

- He was the youngest. ♂
- 17 people in his family
○○○○○○○○○○○○○○○○○○○○

Conclusion/Resolution:

- He died ♂

Theme ♂

- We can be whoever we want.

Sprinkle other strategies

Big Books

- Students sit in proximity to teacher and all can see the book.
- The book includes academic language, authentic/realistic pictures and/or art.
- Each page includes a repetitive frame (or two).
- For ***the first reading***, the teacher reads the whole book through, with fluidity and prosody of a native speaker.

OR

- For subsequent readings, the teacher pauses to discuss and/or have students discuss concepts and vocabulary related to the book.
- Students read along with each repetitive frame.
